

# What if all it took to detect cancer was a simple blood test?

**AMAS**<sup>®</sup> cancer test  
anti-malignin antibody in serum

Malignant Fibrous Histiocytoma of Bone and Osteosarcoma Melanoma, Intraocular (Eye)

Pancreatic Cancer Parathyroid Cancer Pituitary Tumor Prostate Cancer Rectal Cancer Kidney Cancer

Bone Cancer Brain Tumor Breast Cancer Gastrointestinal Cancer Cervical Cancer Childhood Cancers Colon Cancer Colorectal Cancer

Laryngeal Cancer Liver Cancer Lung Cancer Lymphoma

Salivary Gland Cancer Skin Cancer Lung Cancer Small Intestine Cancer Testicular Cancer Throat Cancer Thyroid Cancer Urethral Cancer

The AMAS test measures serum levels of AMA, an antibody found to be elevated in most patients with a wide range of active non-terminal malignancies. Physicians around the country are recommending and administering the AMAS test on a regular basis for patients at high risk for cancer, and for followup purposes on patients already diagnosed and/or treated for cancer.
