Neurotransmitter Testing

Highly sensitive and clinically effective testing tool which provides insight into each patient’s unique symptom picture.

Doctor’s Choice sets new standards in laboratory medicine. Our neurotransmitter testing utilizes HPLC Triple Quadrupole MS/MS technology which is proving to be the most sensitive and accurate methodology for measuring urinary neurotransmitters. This testing is higher sensitivity and has stronger results reproducibility than has been available through other methodologies; this gives you far greater confidence in the reported results. In addition to reliability and accuracy, Doctor’s Choice leads the pack in terms of guaranteed turnaround times, easy to use kits, clinical support for professionals, and top of the line customer service.
**NeuroHormone Complete Plus**

6 Neurotransmitters®, E1, E2, E3, Pg, T, DHEA, 4 Cortisols

$317

This panel includes estrone (E1) and estriol (E3) plus the estrogen quotient. The addition of neurotransmitters to the Comprehensive Plus hormone-only panel provides insight on how HPA axis function may be contributing to symptom manifestation such as mood swings, fatigue, and pain. Because the research on the estrogen quotient and the protective properties of estriol has not been done with men, this panel is currently recommended for women only. This panel should be considered for patients who have:

- Increased risk of developing breast cancer
- History of breast cancer or other hormonally sensitive cancers
- Personal or strong family history of autoimmune disease
- PCOS
- Estrogen dominance related symptoms

---

**NeuroHormone Comprehensive Panel**

6 Neurotransmitters®, E2, Pg, T, DHEA, 4 Cortisols

$289

This panel is the best starting point for initial assessment of hormonal status, adrenal function and neurotransmitter balance. This panel is important for both men and women, providing baseline and monitoring information for patients of all ages. It is especially useful in individuals who are experiencing any of the following symptoms:

- Mood disorders, depression, anxiety
- Addiction, dependency
- Chronic illness, immune deficiency
- Cognitive confusion, learning challenges, declining memory
- Weight issues, appetite control
- Low libido, sexual dysfunction
- PMS, menopause, andropause
- Fibromyalgia, chronic pain

---

**NeuroAdrenal Panel**

6 Neurotransmitters®, DHEA, 4 Cortisols

$215

This panel provides a comprehensive view of HPA axis function. Included is a full diurnal cortisol pattern, DHEA, and 6 primary neurotransmitters (inhibitory and excitatory). Symptoms that would indicate ordering this panel include those shown for the Adrenal Function panel plus:

- Mood disorders, depression, anxiety
- Addiction, dependency
- Chronic illness, immune deficiency
- Low libido, sexual dysfunction

---

**NeuroBasic Panel**

Serotonin, GABA, Dopamine, Epinephrine, Norepinephrine, Glutamate

$159

The NeuroBasic panel is a good tool for monitoring therapeutic interventions of neurotransmitter imbalances previously tested, or when symptoms indicate an imbalance. Includes inhibitory and excitatory neurotransmitters.
